

# Comparing two samples (Chapter 11)

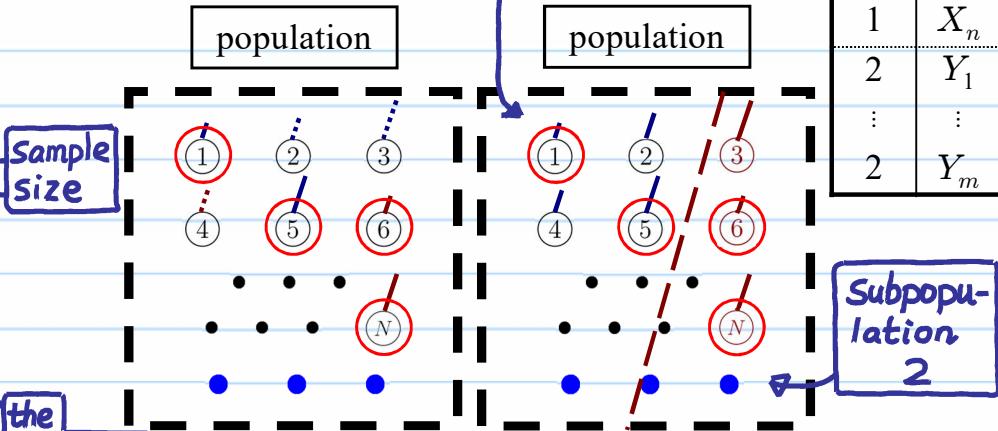

- Comparing two independent samples

- Problem formulation and statistical modeling

observed data from s.r.s (random variables)  
 $\{X_1, \dots, X_n\}$   
 $\{Y_1, \dots, Y_m\}$

- $X_i$ 's,  $Y_j$ 's are continuous quantities of same characteristic
- $X - Y$  is meaningful

s.r.s.,  $N \rightarrow \infty$ :  
without replacement  
 $\approx$  with replacement  
 $(\Rightarrow \text{i.i.d.})$

For example, in medical study,  
•  $X_i$ 's: treatment  
•  $Y_j$ 's: control

For example, in human population,  
•  $X_i$ 's: heights of males  
•  $Y_j$ 's: heights of females

Why?

- $X_1, \dots, X_n \sim \text{i.i.d.}$  with a common continuous distribution  $F$
- $Y_1, \dots, Y_m \sim \text{i.i.d.}$  from a common continuous distribution  $G$
- $\{X_1, \dots, X_n\}$  and  $\{Y_1, \dots, Y_m\}$  are independent

- Let random variables  $Z_1, \dots, Z_n$  and  $Z_{n+1}, \dots, Z_{n+m}$  represent the variability of the  $n + m$  members sampled from the population.

Ch 11, p. 2

- Assume  $Z_1, \dots, Z_{n+m}$  are i.i.d. from a population distribution  $H$ .

- Let  $F$  and  $G$  be the distributions of  $X = \phi(Z)$  and  $Y = \psi(Z)$ , respectively.
- The transformations  $\phi$  and  $\psi$  might contain random components, e.g.,  $\phi(Z) = \phi^*(Z) + \delta$ , where  $\phi^*$ : a fixed function and  $\delta$ : a random variable.
- Let  $\mu_X$  and  $\mu_Y$  be the means of  $F$  and  $G$ , respectively.

If  $\psi(Z) = \phi(Z) + \Delta$ ,  $F, G$ : cdf,  $G(Y) = P(Y \leq y) = P(X + \Delta \leq y) = P(X \leq y - \Delta) = F(y - \Delta)$

add restriction

(a)

$F, G$ : any continuous distribution  $\rightarrow$  nonparametric

- Let  $X_i = \phi(Z_i)$ ,  $i = 1, \dots, n$ ,  $\Rightarrow X_i \sim F$   $\xrightarrow{\text{cf.}}$  r.v.

(b)

$\psi(Z) = \phi(Z) + \Delta$   $\xrightarrow{\text{a parameter}}$   $\mu_Y - \mu_X$

(c)

$F, G$ : normal  $\xrightarrow{\text{can use likelihood}}$

(d)

$F, G$ : normal, same  $\sigma^2$

(e)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(f)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(g)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(h)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(i)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(j)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(k)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(l)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(m)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(n)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(o)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(p)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(q)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(r)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(s)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(t)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(u)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(v)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(w)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(x)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(y)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(z)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(aa)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(bb)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(cc)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(dd)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(ee)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(ff)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(gg)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(hh)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(ii)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(jj)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(kk)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(ll)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(mm)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(nn)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(oo)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(pp)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(qq)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(rr)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(ss)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(tt)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(uu)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(vv)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(ww)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(xx)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(yy)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(zz)

$F, G$ : normal,  $\mu_X, \mu_Y, \sigma^2$

(zzz)

$F, G$ : normal
